Operational Updates

■ Outlook

- The Group anticipates its production volume growth to extend into 2018 from continued yield recovery and contribution from newly mature plantations.
- While higher industry production and competition from other edible oils are expected to influence palm oil prices, improving crude oil prices and potential domestic demand growth from Indonesia's biodiesel mandate may lend some support to prices.
- In the longer term, the fundamentals of the palm oil industry remains favourable, underpinned by expected demand growth from the rising consumption of vegetable oils in emerging markets and biofuel usage, while the sharply reduced pace of new plantings in recent years will lead to an eventual slow-down in global supply growth.
- In view of the proposed special dividend for FY2017 to be paid in May 2018, the Group's effective tax rate in 2018 is expected to be higher from withholding tax expense on dividend income to be received from foreign subsidiaries.
